INTRODUCTION

Daily Core Curriculum provides your students with five starter activities to capture interest at the beginning of the classroom day or start of a new subject. Each daily activity includes key concepts in the following five core subject areas:

- Language & Grammar
- Geography
- Math
- Science
- Writing

Daily Core Curriculum has been designed for any elementary classroom, regardless of the textbooks or other supplementary programs being used. Implementation of the Daily Core Curriculum program is easy. Place the five exercises for the day on the chalkboard, duplicate the questions for students, and/or project them on an overhead projector by photocopying the student pages as transparencies. Another option is to create a flip chart by binding each day's activities at the top. String or a dowel rod can be placed through the binding. Then, they can just be flipped each day. You might want to bind the activities one month at a time. Additionally, you can use the appropriate starter in the content area of your classroom's schedule.

There are many other uses for this book. It can be used for those students who finish early or as part of a center. If you are interested in creating more interest, correct answers can be acknowledged each week. Put all the papers in a box or bag, and choose one at random. If the one you have chosen has the correct answer, that student can receive an award, a prize, or other recognition.

PROGRAM DESIGN

This book contains daily activities with a starter for all five subject areas. There are 120 lessons, and a quiz is located at the end of the book for every 10 lessons (12 quizzes in all). The quizzes include the questions covered in the lessons in standardized test format. Consider using the quizzes in place of the daily activity. There is enough material for you to use for each morning of your school year. Here is an explanation of each part of the daily activities:

DID YOU KNOW?

In this section, students are provided with a journal prompt. Many of these prompts include an important fact from the curriculum areas. Others are thought-provoking topics that encourage students to write creatively. The journal prompt provides a good starter for transition times — before/after recess, before/after lunchtime, or as a starter to writing time on your schedule. Textbooks and research materials (encyclopedias, almanacs, and even Internet access) may be helpful with some journal prompts.

LANGUAGE

Daily practice is given in the areas of capitalization, punctuation, spelling, and grammar. This is a good starter for language arts and/or reading time on your schedule.

MATH

Students are challenged with daily problems that are aligned with the NCTM Standards. This is a good starter for math time on your schedule.

GEOGRAPHY

United States and world geography are reviewed as well as map skills and grade level key terms. This is a good starter for history or social studies time on your schedule. Textbooks and research materials (encyclopedias, almanacs, and Internet access) may be helpful with these questions.

SCIENCE

All areas of the science curriculum are covered. This is a good starter for science time on the schedule. Textbooks and research materials (encyclopedias, almanacs, and Internet access) may be helpful with these questions.

TIME MANAGEMENT

Students quickly become focused as they copy the starters and begin answering them. For some questions, students may need to use textbooks and reference materials to search for answers. Each problem usually takes no more than 5-7 minutes to complete. It is recommended (for consistency) that the exercises be used on a regular daily basis versus once a week.

Enjoy Daily Core Curriculum each day of the school year!
