

IRON-ON INSTRUCTIONS:

CAUTION! Irons get very hot and are dangerous. Please ask your parents to help you iron on your design and never handle a hot iron by yourself. It is very important that you follow the instructions that come with your transfer paper.

1. Load your printer with iron-on transfer paper, which is available at most craft and office supply stores.
2. Click "Print" to print your design on the paper. The design will print reversed. This is normal.
3. Cut out just inside the dotted line so that you don't see dotted lines on your iron-on.
4. Heat iron according to the instructions for your transfer paper.
5. Place the drawing, color side down, on a t-shirt, cloth or clothing. White or light colored materials work best.
6. Iron-on as instructed by the directions for your transfer paper.
7. Peel back transfer as instructed for your transfer paper. Allow the shirt to cool. Follow all other instructions that come with your transfer paper for handling and washing.
