Great Graphing!

Let's keep track of the weather. Each day that you use your weather wheel this month, color in one space on the bar graph. For example, if it's a sunny day, color in one space above the picture of the sun. At the end of the month, count how many days were sunny, cloudy, rainy and snowy, then write the number on the lines.

Month: _____

Stars in a Jar

The night sky is a beautiful sight! This activity allows you to have your own night sky to look at any time you like.

For this project you will need:

- 1-2 bottles of Karo Syrup (light-colored corn syrup), depending on the size jar you use.
- A clear, empty jar.
- A handful of glow-in-the-dark stars
- A tube of glitter (approximately ½ cup). Blue or silver glitter may work best.

Let's create a night sky in a jar!

- Add all ingredients to the jar.

  Add glitter slowly to the syrup. A little goes a long way.

- Have a grown-up help you seal the jar.
- Let the jar sit in the light to "charge" the stars.
- Take the jar into a dark room and enjoy your night sky!

DISCOVERING SEASONS

Seasons are always changing. The sun provides light and heat, warming the ground and water. As the year goes by, the sun shines less during the day, making it colder and changing the weather.
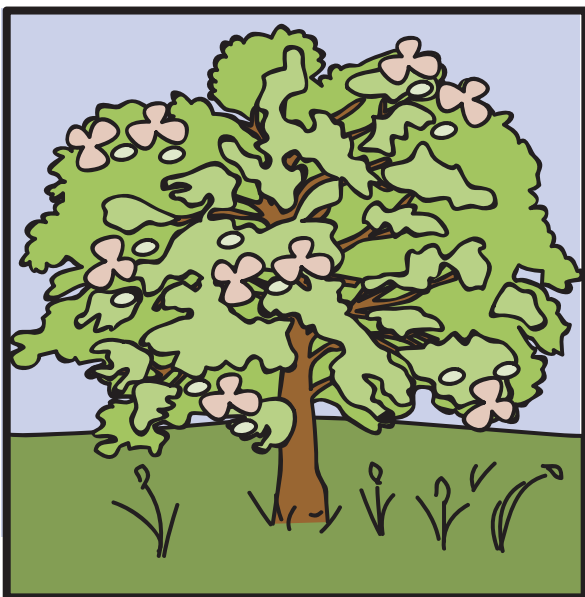

Write <u>spring</u>, <u>summer</u>, <u>fall</u>, or <u>winter</u> next to the picture that matches.

2. _____

3. _____
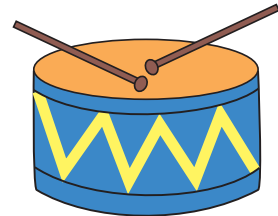

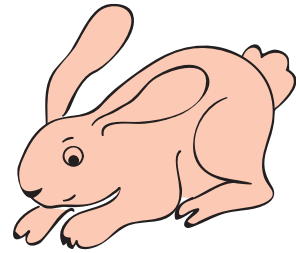

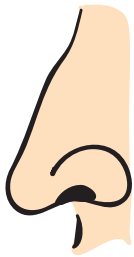

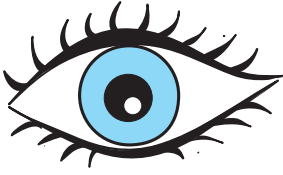

4. _____

What do living things need?

Now that we know what living things are, we must make sure that we take care of them. What do living things need to survive? Look at each picture in the box. Draw pictures of the things that these animals or organisms must have to survive. Grown-ups: Please remind your child about the need for oxygen!
