## AIEEE 2010 Physics Held on (25-04-2010)

## PART A - PHYSICS

Directions: Questions number 1-3 are based on the following paragraph.

An initially parallel cylindrical beam travels in a medium of refractive index  $\mu(I) = \mu_0 + \mu_2 I$ , where  $\mu_0$  and  $\mu_2$  are positive constants and I is the intensity of the light beam. The intensity of the beam is decreasing with increasing radius.

- The initial shape of the wavefront of the beam is
  - (1) planar
  - (2) convex
  - (3) concave
  - (4) convex near the axis and concave near the periphery
- 2. The speed of light in the medium is
  - (1) maximum on the axis of the beam
  - (2) minimum on the axis of the bean
  - (3) the same everywhere in the bean
  - (4) directly proportional to the intensity I
- 3. As the beam enters the motion, t will
  - (1) travel as a cylindrical ream
  - (2) diverge
  - (3) converge
  - (4) diverge near the axis and converge near he perphery

Directions: Questions number 4-5 are based the following paragraph.

A nucleus of mass  $M + \Delta m$  is restand decays into two daughter nuclei of equal mass  $\frac{M}{2}$  each. Speed of light sec.

- 4. The speed of daughter nuo
  - (1) c
  - (2) Am

- (4)  $c \sqrt{\frac{\Delta m}{M}}$
- The binding energy per nucleon for the parent nucleus is E<sub>1</sub> and that for the daughter nuclei is E<sub>2</sub>. Then
  - (1)  $E_1 = 2E_2$
  - (2)  $E_2 = 2E_1$
  - (3)  $E_1 > E_2$
  - (4)  $E_2 > E_1$

- Directions: Questions number 6-7 contain 8.

  Statement-1 and Statement-2. Of the four choices given after the statements, choose the one that best describes the two statements.
- 6. Statement-1: When ultraviolet light is incident on a photocell, its stopping potential is V<sub>0</sub> and the maximum kinetic energy of the photoelectrons is K<sub>max</sub>. When the ultraviolet light is replaced by X-rays, both V<sub>0</sub> and K<sub>max</sub> increase.

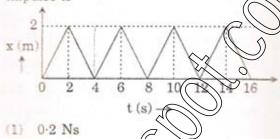

Statement-2: Photoelectrons are emitted with speeds ranging from zero to a maximum value because of the range of frequencies present in the incident light.

- (1) Statement-1 is true, Statement-2 is 9. false.
- (2) Statement-1 is true, Statement-2 is true; Statement-2 is the correct explanation of Statement-1.
- (3) Statement-1 is true, Statement-2 is true; Statement-2 is not the correct explanation of Statement-1.
- (4) Statement-1 is false, Statement-2 is true.
- 7. Statement-1: Two particles moving in the same direction do not lose. all their energy in a completely inelastic collision.

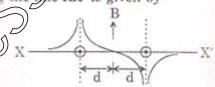

Statement-2: Principle of conservation of momentum holds true for all kins of collisions.

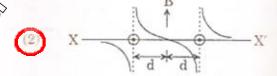

- (N Statement-1 is true, Ctatement-2 is false.
- (2) Statement-1 is true, statement-2 is true; Statement-2 the correct explanation of Statement-1.
- (3) Statement-1 is true; Statement-2 is not the correct explanation of Statement-1.
- (4) Statement is false, Statement-2 is

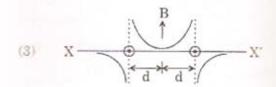

8. The figure shows the position - time (x-1) graph of one-dimensional motion of a boof of mass 0.4 kg. The magnitude of impulse is

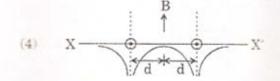

- (1) 0·2 Ns (2) 0·4 Ns
- (3) 0.8 Ns (4) 1.6 Ns
- apart. The vary steady equal currents flowing out of the plane of the paper as show. The variation of the magnetic field is also the Dhe XX' is given by

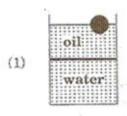

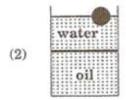

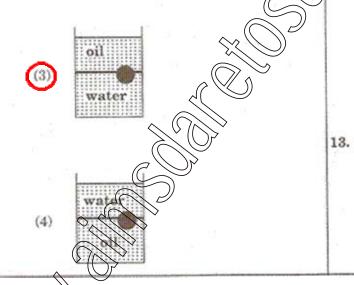

10. A ball is made of a material of density  $\rho$  where  $\rho_{\rm oil} < \rho < \rho_{\rm water}$  with  $\rho_{\rm oil}$  and  $\rho_{\rm water}$  representing the densities of oil and water, respectively. The oil and water are immiscible. If the above ball is in equilibrium in a mixture of this oil and water, which of the following pictures represents its equilibrium position?

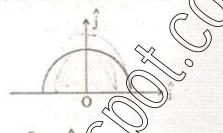

10. A ball is made of a material of density  $\rho$  11. A thin semi-circular ring of radius r has a where  $\rho_{\rm oil} < \rho < \rho_{\rm water}$  with  $\rho_{\rm oil}$  and positive charge q distributed uniformly were

it. The net field E at the centre

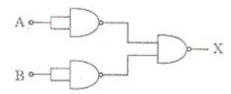

- A diatomic ideal gas is used in a Carnot engine as the working substance. If during the adiabatic expansion part of the cycle the volume of the gas increases from V to 32 V, the efficiency of the engine is
- (1) 0.25
- (2) 0-5
- (3) 0·75 (4) 0·99
- 3. The respective number of significant figures for the numbers 23-023, 0-0003 and  $2\cdot 1\times 10^{-3}$  are
  - (1) 4, 4, 2
  - (2) 5, 1, 2
  - (3) 5, 1, 5
  - (4) 5, 5, 2

The combination of gates shown below yields

- (1) NAND gate
- (2) OR gate
- (3) NOT gate
- (4) XOR gate
- 15. If a source of power 4 kW produces 10<sup>20</sup> photons/second, the radiation belongs to a part of the spectrum called
  - (1) y-rays
  - (2 X-rays
    - (3) ultraviolet rays
    - (4) microwaves
- 16. A radioactive nucleus (initial mass number A and atomic number Z) emits 3 α-particles and 2 positrons. The ratio of number of neutrons to that of protons in the heal nucleus will be
  - $(1) \quad \frac{A-Z-4}{Z-2}$
  - $(2) \quad \frac{A-Z-8}{Z-4}$
  - $(3) \quad \frac{A-Z-4}{Z-8}$
  - (4)  $\frac{A-Z}{ZC}$

- Let there be a spherically symmetric charge distribution with charge density varying
  - $\rho(r) = \rho_0 \left( \frac{5}{4} \frac{r}{R} \right)$  upto r = R, and  $\rho$

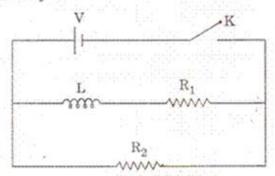

for r > R, where r is the distance the origin. The electric field at distance r (r < R) from the origin is given by

- (1)  $\frac{\rho_o r}{3\epsilon_o} \left( \frac{5}{4} \frac{r}{R} \right)$
- (2)  $\frac{4\pi\rho_0 r}{3\epsilon_0} \left(\frac{5}{3}\right)$

In a series LCR circuit R = 200 Ω and the voltage and the frequency of the main supply is 220 V and 50 Hz respectively. On taking out the capacitance from the circuit the current lags behind the voltage by 30°. On taking out the inductor from the circuit the current leads the voltage by 30°. The power dissipated in the LCR circuit is

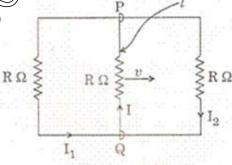

- (1) 242 W
  - (2) 305 W
  - (3) 210 W
  - (4) Zero W

19. In the circuit shown below, the key K is closed at t = 0. The current through the battery is

- (1)  $\frac{V(R_1 + R_2)}{R_1 R_2}$  at t = 0 and  $\frac{V}{R_2}$  at  $t = \infty$
- (2)  $\frac{VR_1R_2}{\sqrt{R_1^2 + R_2^2}}$  at t = 0 and  $\frac{V}{R_2}$  at  $t = \infty$
- (3)  $\frac{V}{R_2}$  at t = 0 and  $\frac{V(R_1 + R_2)}{R_1 R_2}$  at t =  $\infty$
- (4)  $\frac{V}{R_2}$  at t = 0 and  $\frac{VR_1R_2}{\sqrt{R_1^2 + R_2^2}}$  at t = 0
- 20. A particle is moving with socity  $\vec{v} = K(y\hat{i} + x\hat{j})$ , where  $\vec{v}$  is sometimes. The general equation for its with is
  - (1)  $y^2 = x^2 + constant$
  - (2)  $y = x^2 + constant$
  - (3)  $y^2 = x + (3)^2$
  - (4) xy = (15)

- Let C be the capacitance of a capacitor discharging through a resistor R. Suppose is the time taken for the energy stored in the capacitor to reduce to half its value and to reduce to one-fourth its initial value. Then the ratio to the rat
- (1) 2
- (2) 1
- (3)  $\frac{1}{2}$
- (4) <sup>1</sup>/<sub>4</sub>
- A rectandar on has a sliding connector PQ of length and resistance R  $\Omega$  and it is moving with a speed v as shown. The set-up is placed in a uniform magnetic field going into the plane of the paper. The three layer  $I_1$ ,  $I_2$  and I are

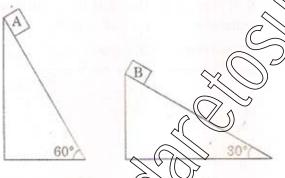

- (1)  $I_1 = I_2 = \frac{Blv}{6R}$ ,  $I = \frac{Blv}{3R}$
- (2)  $I_1 = -I_2 = \frac{Blv}{R}$ ,  $I = \frac{2Blv}{R}$
- (3)  $I_1 = I_2 = \frac{Blv}{3R}$ ,  $I = \frac{2Blv}{3R}$
- $(4) \quad \mathbf{I_1} = \mathbf{I_2} = \mathbf{I} = \frac{\mathbf{B} l v}{\mathbf{R}}$

23. The equation of a wave on a string of 25. linear mass density 0.04 kg m<sup>-1</sup> is given by

$$y = 0.02(m) \sin \left[ 2\pi \left( \frac{t}{0.04(s)} - \frac{x}{0.50(m)} \right) \right].$$

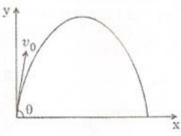

The tension in the string is

- (1) 6·25 N
- (2) 4·0 N
- (3) 12·5 N
- (4) 0.5 N
- 24. Two fixed frictionless inclined planes making an angle 30° and 60° with the vertical are shown in the figure. Two blocks A and B are placed on the two planes. What is the relative vertical acceleration of A with respect to B?

- (1) 4.9 ms<sup>-2</sup> in vertical frection
- (2) 4.9 ms<sup>-2</sup> i horizontal direction
- (3) 9-8 Partical direction
- (4) Zer(7)

- 25. For a particle in uniform circular motion, the acceleration a at a point P (R, θ) on the circle of radius R is (Here θ is measured from the x-axis)
  - $(1) \quad \frac{v^2}{R} \stackrel{\wedge}{i} + \frac{v^2}{R} \stackrel{\wedge}{j}$
  - (2)  $-\frac{v^2}{R}\cos\theta \hat{i} + \frac{v^2}{R}\sin\theta$
  - (3)  $-\frac{v^2}{R}\sin\theta$  i R
  - $\frac{1}{4} \frac{v^2}{R} \cos \left(i\right) + \sin \theta$
- 26. A small particle of mass m is projected at an angle with the x-axis with an initial velocity of the x-y plane as shown in the x-y plane as shown in the x-y plane at x-y

- (1)  $\frac{1}{2} \operatorname{mg} v_0 t^2 \cos \theta$
- (2)  $\text{mg } v_0 \text{ t}^2 \cos \theta \hat{j}$
- (3) mg  $v_0$  t cos 0  $\hat{k}$
- (4)  $-\frac{1}{2} \operatorname{mg} v_0 t^2 \cos \theta \hat{k}$

where î, ĵ and k are unit vectors along x, y and z-axis respectively.

- Two identical charged spheres are suspended by strings of equal lengths. The strings make an angle of 30° with each other. When suspended in a liquid of density 0.8 g cm<sup>-3</sup>, the angle remains the same. If density of the material of the sphere is 1.6 g cm<sup>-3</sup>, the dielectric constant of the liquid is
  - (1)
  - (2) 4
  - (3) 3
  - (4) 2
- 28. A point P moves in counter-clockwise direction on a circular path as shown in the figure. The movement of 'P' is such that it sweeps out a length  $s = t^3 + 5$ , where s in metres and t is in seconds. The radius of the path is 20 m. The acceleration of 'P' when t = 2 s is nearly

- (1) 14 m/s<sup>2</sup>
- (2) 13 m/s
- 3/025
- (4)

9. The potential energy function for the force between two atoms in a diatomic process is approximately given by U(x)  $\frac{b}{x^6}$ , where a and b are constants and x is the distance between the above If the

where a and b are constants and x is the distance between the above. If the dissociation energy of the molecule is  $D = [U(x = \infty) - U_{a}]$ 

- $(1) \quad \frac{b^2}{6a}$
- $(2) \quad b^2 \qquad \qquad$
- $\frac{b^2}{4a}$

Two conductors have the same resistance at 0 °C but their temperature coefficients of resistance are  $\alpha_1$  and  $\alpha_2$ . The respective temperature coefficients of their series and parallel combinations are nearly

- $(1) \frac{\alpha_1 + \alpha_2}{2}, \frac{\alpha_1 + \alpha_2}{2}$
- $(2) \quad \frac{\alpha_1 + \alpha_2}{2} \, , \quad \alpha_1 + \alpha_2$
- (3)  $\alpha_1 + \alpha_2$ ,  $\frac{\alpha_1 + \alpha_2}{2}$
- $(4) \quad \alpha_1 + \alpha_2, \quad \frac{\alpha_1 \alpha_2}{\alpha_1 + \alpha_2}$
